

AI-Assisted Development and Git Mastery

Jose Luis Martin Blanco

Initializing the Local Repository

I started by running `git init` to create the hidden folder that tracks everything I do in this project.

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git init  
Initialized empty Git repository in C:/Users/Usuario/Desktop/mi-proyecto-ia/.git/
```

Staging Area and Status

After checking the status with `git status`, I moved my Java code to the staging area using `git add`.

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git status
On branch main

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    Conversor.java

nothing added to commit but untracked files present (use "git add" to track)
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git add Conversor.java
```

Initial Commit

I completed my first commit to save the initial state of the unit converter. Now, the baseline code is safely stored in the repository's history.

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git commit -m "Initial commit: Conversor basic in Java"
[main (root-commit) 8be9aa1] Initial commit: Conversor basic in Java
1 file changed, 15 insertions(+)
create mode 100644 Conversor.java
```

Feature Branching

I created a dedicated branch called joseluis to develop new updates.

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git checkout -b joseluis  
Switched to a new branch 'joseluis'
```

Branch Commitment

Once I added the Kelvin conversion logic, I registered those changes within my branch.

- PS C:\Users\Usuario\Desktop\mi-proyecto-ia> `git add .`
- PS C:\Users\Usuario\Desktop\mi-proyecto-ia> `git commit -m "Improvement made to my branch"`
[joseluis 4a528a1] Improvement made to my branch
1 file changed, 3 insertions(+), 4 deletions(-)

Merging to Main Branch

After making sure the new functions worked perfectly, I merged the joseluis branch into main. This combines all my work into the final, stable version of the app.

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git checkout main
Switched to branch 'main'
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git merge joseluis
Updating 8be9aa1..4a528a1
Fast-forward
  Conversor.java | 7 +++----
  1 file changed, 3 insertions(+), 4 deletions(-)
```

Remote Deployment

After finishing the local work, I linked my project to GitHub and pushed the entire history. This was the final step to have all my code safely stored and accessible in the cloud.

```
PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git remote add origin https://github.com/jmb0049-code/mi-proyecto-ia.git
PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git branch -M main
PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git push -u origin main

 * [new branch]      main -> main
branch 'main' set up to track 'origin/main'.
```

Professional Documentation

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> code README.md
PS C:\Users\Usuario\Desktop\mi-proyecto-ia>
●
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git add README.md
PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git commit -m "add professional readme"
[main b6ef658] add professional readme
1 file changed, 17 insertions(+)
create mode 100644 README.md
```

```
● PS C:\Users\Usuario\Desktop\mi-proyecto-ia> git push origin main

To https://github.com/jmb0049-code/mi-proyecto-ia.git
4a528a1..b6ef658 main -> main
○ PS C:\Users\Usuario\Desktop\mi-proyecto-ia>
```

To wrap up, I created the README file using only the terminal.

Reflection

In this project I have done all the steps to create a project and upload it to git, creating branches, making commits, etc., for this I have used the commands learned in class

<https://github.com/jmb0049-code/mi-proyecto-ia.git>
